

DURAN VENTURES INC.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Form 51-102F2

**For the Six Month Period Ended
June 30, 2011**

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

Report Dated August 25, 2011

Overall Performance

General

This Management's Discussion and Analysis is provided for the purpose of reviewing the six month period ended June 30, 2011 and comparing results to the previous period. This Management's Discussion and Analysis should be read in conjunction with the Company's unaudited condensed interim consolidated financial statements and corresponding notes for the six month period ending June 30, 2011. The condensed interim consolidated financial statements are prepared in accordance with International Financial Reporting Standards ("IFRS") and all monetary amounts are expressed in Canadian dollars unless otherwise indicated in the notes to the condensed interim consolidated financial statements.

This Management's Discussion and Analysis is prepared as of August 25, 2011. All of the scientific and technical information has been prepared or reviewed by Cary Pothorin, P.Geol., President of the Company. Mr. Pothorin is a Qualified Person within the meaning of National Instrument 43-101 ("NI 43-101"). Additional information relevant to the Company's activities can be found at www.sedar.com.

Forward Looking Statements

Certain statements contained in this Management's Discussion and Analysis constitute forward-looking statements. Such forward-looking statements involve a number of known and unknown risks, uncertainties and other factors which may cause the actual results, and performance of achievements of the Company to be materially different from actual future results and achievements expressed or implied by such forward-looking statements, which speak only as of the date the statements were made and readers are also advised to consider such forward-looking statements while considering the risk set forth below.

Description of Business

The Company was incorporated under the laws of British Columbia on March 5, 1997 under the name 537926 B.C. Ltd. and its principal business activity is the acquisition and exploration of mineral properties. On June 18, 1997 the Company changed its name to Duran Gold Corp. and on August 10, 2000, the Company changed its name to Duran Ventures Inc. On July 4, 2007, the Company was promoted to the TSX Venture Exchange as a Tier II issuer trading under the symbol DRV.V. On October 14, 2008, the Shareholders approved the continuance of the Company under the Canada Business Corporations Act, which was completed by October 31, 2008.

The General and Administrative expenses relate primarily to the costs to maintain a head office in Toronto for a publicly listed company. On-going operating expenses, excluding items such as exploration property expenditures and stock-based compensation expenses, are approximately \$86,000 (2010 - \$66,000) per month.

The Company is not in default under any debt or other contractual obligations. The Company is not in breach of any corporate, securities or other laws or of the terms of the listing agreement with the TSX Venture Exchange.

Exploration Properties

In 2011, the Company is primarily focusing on advancing the Aguila Copper-Molybdenum Porphyry project. An extensive diamond drilling program is underway in order to provide the necessary information to compile a preliminary NI 43-101 compliant resource estimate in the first quarter of 2012. Preliminary metallurgical studies will also be carried out as part of the resource estimate work.

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

Diamond drilling at the Corongo Gold-Silver Project was carried out simultaneously with the Aguila drilling program. Geochemical and geophysical targets were tested with an initial program of 1,757 metres of diamond drilling.

The Company will be preparing the Ichuña Copper-Silver Project site in the Moquegua area for a preliminary diamond drill program. The geological, geochemical, and geophysical results to date indicate the presence of a copper-silver mineralized system over a 2.5 kilometre trend. The Moquegua region is emerging as an important mineralized district in Southern Peru.

All projects are described below.

Aguila Copper-Molybdenum Project

The Company is focused on developing its flagship project, the Aguila Copper Molybdenum Porphyry Project. Fieldwork and past drilling indicate that there are additional porphyry-style targets in what is recognized as a large emerging mineralized district. Where most technical work and drilling to date has focused on the immediate area of the Aguila intrusive and mine area, the Company has strong indications of significant porphyry copper related mineralization in adjacent zones.

On March 23, 2011, the Department of Environmental Affairs of the Peruvian Ministry of Energy and Mines granted a Category 2 Drill Permit for the Company's Aguila Project. The permit allows for 61,600 metres of drilling over a 23 month period. This time frame is calculated from the initiation date of the work program.

The Company has approved a \$5.6 million budget for a diamond drilling program at Aguila for 2011. The diamond drilling program is designed to provide the necessary information for an initial NI 43-101 compliant resource estimate in the first quarter of 2012. The drilling is anticipated to require 7-8 months to complete, with the resource estimate to follow. SRK Consulting has been retained to prepare the NI 43-101 resource estimate.

Energold Drilling Peru S.A.C. was contracted for the Aguila drill program on March 23rd, and drilling at Aguila commenced on April 19th. Two drill rigs arrived on site on April 15th, a third on May 17th, and a fourth on July 15th. Approximately 11,500 metres have been drilled in 20 holes as of the third week of August 2011.

Surface mapping, sampling, and geophysical surveys conducted to date demonstrate that the Aguila Project has potential to become a significant copper-molybdenum resource, with anomalous copper and molybdenum distributed over an irregular 1.7 x 1.2 kilometre surface area and strong geophysical anomalies distributed over a 3.0 x 2.0 kilometre area. Drill intersections to date show consistent copper and molybdenum values over significant widths, with known areas of mineralization open in several directions and also at depth.

Results from the first nine drill holes of the 2011 program are described below (please see news releases dated June 6, June 28, and August 5, 2011, at <http://www.duranventuresinc.com/news.php> for full details).

Diamond drill hole 11AGD018 was drilled at the western edge of the Aguila open pit at an azimuth of 70 degrees and an inclination of -75 degrees to a final depth of 718.1 metres. The assays from the initial 480.8 metres from surface returned 0.69% Cu and 0.031% Mo, for a Cu equivalent value of 0.93%.

Diamond drill hole 11AGD019 was drilled on the eastern edge of the Aguila open pit at an azimuth of 70 degrees and an inclination of -70 degrees to a final depth of 673.5 metres. The assays for the initial 495.6 metres averaged 0.31% Cu and 0.027% Mo, or 0.50% Cu equivalent.

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

Diamond drill hole 11AGD020 is located between holes 11AGD018 and 11AGD019 on section 10000N, and was drilled at an azimuth of 70 degrees and an inclination of -70 degrees to a final depth of 640.0 metres. The initial 333.9 metres from surface intersected the main Aguila porphyry, with an average of 0.60% Cu and 0.035% Mo (Cu equivalent value of 0.85%). The interval from 333.9 to 640 metres depth, which intersected mostly altered host sediments, averaged 0.19% Cu and 0.031% Mo (Cu equivalent value of 0.41%).

The Company caps or limits high copper values at a 3% maximum value, as higher grades above this limit are not considered representative of the copper porphyry copper mineralization at Aguila. In hole 11AGD020, one higher grade copper value of 17.4% over 0.6 metres (sample #9722) was capped at 3%.

Diamond drill hole 11AGD021 was drilled at the northern end of the Aguila open pit on drill section 10100N at an azimuth of 70 degrees and an inclination of -70 degrees to a final depth of 722.6 metres. The 197.2 metre interval from 80.8 metres depth to 278.0 metres depth intersected mostly porphyritic diorite intrusive rock, and returned an average of 0.64% Cu and 0.041% Mo (Cu equivalent of 0.92%). The initial 335 metres, which included both diorite intrusive and sedimentary rock, averaged 0.48% Cu and 0.036% Mo (Cu equivalent of 0.72%).

Diamond drill hole 11AGD022 was drilled approximately 100 metres to the east of 11AGD021 at an azimuth of 70 degrees and an inclination of -70 degrees to a final depth of 557.3 metres. The initial 117.35 metres from surface averaged 0.87% Cu and 0.029% Mo (Cu equivalent value of 1.06%). This interval intersected predominantly diorite porphyry intrusive with some sedimentary rock.

Diamond drill hole 11AGD023 was drilled at an azimuth of 70 degrees and an inclination of -70 degrees to a final depth of 699 metres on section 10100N. The initial 344.7 metres from surface intersected mostly host sedimentary rock with minor diorite intrusive, and averaged 0.20% Cu and 0.043% Mo (Cu equivalent value of 0.50%). The 244 metre interval from 243 to 487 metres depth intersected both diorite porphyry intrusive rock and host sedimentary wallrock, and averaged 0.32% Cu and 0.040% Mo (Cu equivalent value of 0.59%).

Diamond drill hole 11AGD024 was drilled on section 9900N at an azimuth of 70 degrees and an inclination of -70 degree to a final depth of 590 metres. The initial 189 metres from surface averaged 0.30% Cu and 0.022% Mo (Cu equivalent value of 0.46%). This interval consists of a mix of diorite porphyry intrusive rock and host sedimentary wallrock.

Diamond drill hole 11AGD025 was also drilled on section 9900N, approximately 110 metres to the west of hole 11AGD024. The hole was drilled at an azimuth of 70 degrees and an inclination of -70 degrees to a final depth of 662.6 metres. The 321.5 metre interval from 21.0 to 342.5 metres depth averaged 0.22% Cu and 0.047% Mo (Cu equivalent of 0.54%). This interval intersected sedimentary wallrock with occasional narrow intervals of diorite porphyry intrusive material.

Diamond drill hole 11AGD026 was drilled on section 10200N. The hole was drilled at an azimuth of 70 degrees and an inclination of -70 degrees to a final depth of 668.5 metres. The initial 562.1 metres from surface averaged 0.25% Cu and 0.010% Mo (Cu equivalent of 0.32%), which includes a 302.1 metre interval from surface which averaged 0.33% Cu and 0.016% Mo (Cu equivalent of 0.44%). These intervals predominantly cut host sedimentary wallrock with minor diorite porphyry intrusive rock.

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

The Company is very pleased with progress and results from the drill program to date, which is focused on defining the size and tenor of the mineralized system in the main Aguila intrusive body and the associated altered and mineralized halo in the host sedimentary rock. The current program and previous historical drilling has so far covered an irregular area of approximately 400 metres N-S and more than 500 metres E-W, with a vertical extent exceeding 500 metres. The Cu-Mo mineralization remains open laterally and down plunge. The remainder of the drill program will be focused on expanding the known mineralized area to the extent that the planned metreage will allow. Numerous geological, geochemical, and geophysical targets will remain to be drill tested after the conclusion of the present drill program.

On May 27, 2011, the Company filed a NI 43-101 Technical Report for its 100% owned Aguila Porphyry Copper-Molybdenum Project in Peru. The report was prepared by Mr. Neil McCallum, P. Geo., who is a "qualified person" under the definition of NI 43-101. The Aguila Property is at an early stage of exploration, with no estimate of resources.

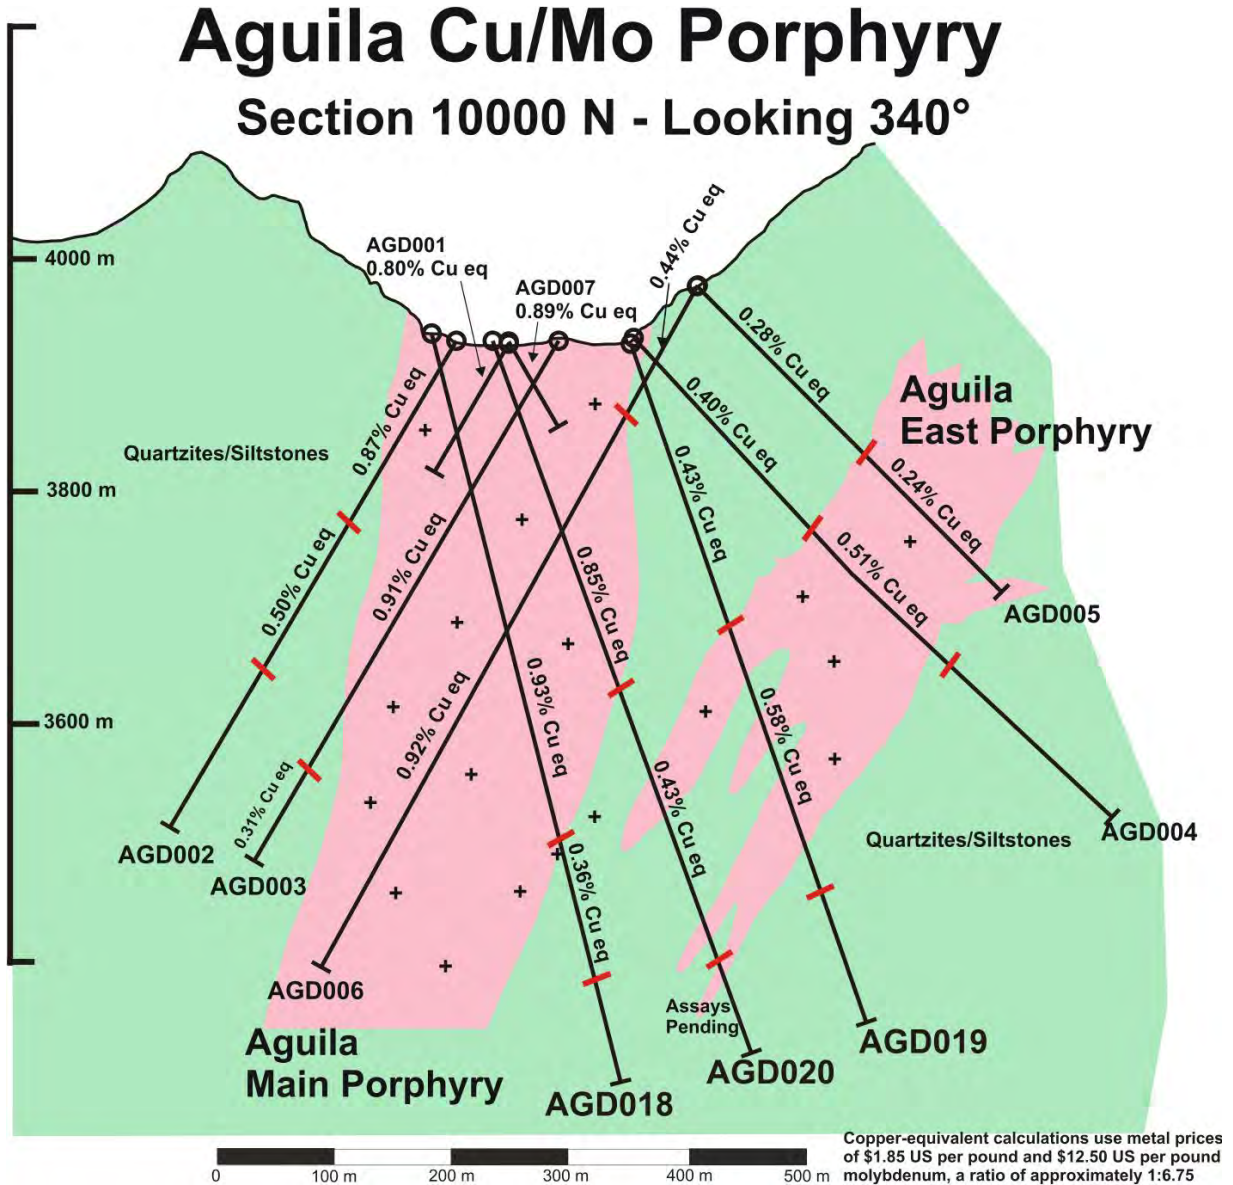

A representative of SRK Consulting has completed an initial site audit, which included a review of drilling, core logging, sampling, laboratory analytical, quality control, and data management procedures and practices.

Company geologists believe that the Aguila Project is comparable in terms of style/grade of mineralization and geological setting to the nearby Magistral deposit, but that Aguila may offer greater tonnage potential. Magistral is a copper – molybdenum porphyry and skarn deposit, located some 40 kilometres to the north of Aguila. A feasibility study carried out by MTB Project Management Professionals in December of 2007 defined Proven and Probable Reserves of 113.5 million tonnes at 0.49% copper and 0.05% molybdenum. The study predicted a 15 year mine life, with initial capital expenditures of \$402 million, before IGV tax (a Peruvian VAT). The central five "Magistral" concessions cover 250 hectares. (<http://www.incapacific.com/s/Magistral.asp>).

In 2011, Compañía Minera Milpo S.A.A ("Milpo") obtained the Magistral project in a Peruvian government auction in return for, inter alia, the obligation to invest \$400 million during a 48 month period, and to make a final \$8.02 million option payment in order to complete the transfer of title to Milpo.

* Total Cu equivalent is the sum of the Cu% plus 6.756 times the Mo% based on an assumed 6.756:1 economic ratio of Mo to Cu selling prices (i.e. US\$1.85 Cu to US\$12.50 Mo). Metallurgical recoveries and net smelter returns are assumed to be 100%. These equivalence grades should not be interpreted as actual grades since the conversion ratio varies with the volatile prices of copper and molybdenum and the economic recovery of copper and molybdenum can vary significantly in actual extraction and processing. The Company feels this is a reasonable long term ratio to use for this purpose.

Additions to Current Concessions in Peru

The Company acquired additional strategic holdings which border existing project areas, adding a total of 6,106 hectares in February of 2011. In the Aguila Copper-Molybdenum Porphyry Project area, 706 hectares were added on to the southwest of current Company holdings. 800 hectares were added on the south side of Company holdings in the Minasnioc Epithermal Gold-Silver Project in Huancavelica. 1,400 hectares were added on to the Matucana Silver-Lead-Zinc Project in the Department of Lima. Finally, 3,200 hectares have been added on to the Panteria Porphyry Copper-Gold Project area in Huancavelica. In all cases, these additions include very prospective ground and increase the potential in these projects.

Mamaniña Porphyry Copper-Molybdenum-Gold Project

The Company was awarded the Mamaniña 1 and 2 concessions in the Province of Huaylas in the Department of Ancash, Peru. Initially the area was claimed in early February 2011 by three companies: Duran, one large international mining company, and one large Peruvian mining company. A closed-bid auction for the concessions was held on April 13th by the Peruvian Government. Duran was the successful bidder and was awarded the concessions. The process of receiving the mineral titles, is underway.

The concessions are located approximately 14 kilometres to the south of the Company's flagship Aguila Copper-Molybdenum Porphyry Project. The Company now holds a total of 1,800 hectares in three contiguous concessions, including the Mamaniña 3 concession, which was not subject to the property auction.

The Mamaniña concessions are considered by Duran geologists to be a high quality copper-molybdenum exploration target. Previous work performed by Queenstake Resources Limited ("Queenstake") and Alamos Minerals Limited ("Alamos") in a joint venture operated from 1995-1997, and Monterrico Metals PLC ("Monterrico") during 2001-2008, defined both porphyry copper molybdenum and copper-gold-zinc skarn mineralization on surface. Company geologists confirmed the geological characteristics of the previous work programs and recommended the acquisition of the new concessions.

Queenstake and Alamos found copper-molybdenum bearing porphyritic stocks hosted by clastic and carbonate sediments at Mamaniña. Carbonate replacement skarn-type mineralization occurs at contacts between the intrusive and sedimentary units. An airborne magnetic and radiometric geophysical survey defined an anomaly two kilometres in diameter which coincides with these mineralized zones on surface. Sampling by Queenstake and Alamos returned values of up to 2.1% copper, 0.6% zinc, and 9.48 grams of

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

gold per tonne. A joint news release was filed on Sedar by Queenstake and Alamos dated November 3, 1997.

Monterrico carried out a very limited diamond drill program in late 2002, targeting near surface copper anomalies in the skarn area. Results are not known with the exception that Monterrico's 2002 Annual Report noted that drilling intersected high-grade copper mineralization including 25 metres at 1.65% copper starting at 14 metres below surface. It was also noted that low grade gold was discovered in the same hole. Monterrico's geologists recommended further exploration for a potential gold resource in the southern sector of the property, indicated by a widespread geochemical anomaly.

The proximity to Duran's Aguila and Peñoles' Racaycocha Projects reinforces the Company's view that the Aguila area is a new emerging mineralized district. The acquisition of the Mamaniña Cu-Mo-Au concessions reflects Duran's corporate strategy to focus on the Company's main projects while retaining its entrepreneurial approach to securing quality new concessions, particularly in the vicinity of its key projects.

Corongo Property

This 3,100 hectare block of claims is located five kilometres to the northwest of the main Aguila/Pasacancha claim block. The Corongo Property is located in a portion of the Western Cordillera of Peru that hosts numerous precious and base metal deposits, including Barrick Gold Corporation's Pierina and Lagunas Norte gold mines and Compania Minera Antamina S.A.'s Antamina copper-zinc mine. The Corongo Property is considered very prospective for sediment-hosted structurally controlled gold and silver mineralization, as well as porphyry copper related mineralization. Significant gold and silver results were returned from 401 samples collected during the 2010 work program, collected from the Santa Rosa East and Descubridora Zones.

The Company signed a property option agreement (the "Corongo Agreement") with Viper Gold Ltd. ("Viper") in March 2010, and subsequently amended in August 2010, whereby Viper can acquire a 50% interest in the Corongo Property. Under the terms of the Corongo Agreement, Viper may acquire a 50% interest by paying the Company US\$25,000 (paid - \$25,348) on signing the Corongo Agreement; incurring exploration expenditures of not less than US\$1,000,000 prior to March 10, 2012 (US\$682,105 or CDN\$657,890 incurred as of June 30, 2011); and issuing the Company an aggregate amount of 1,000,000 common shares of Viper as to: (a) 300,000 common shares on August 17, 2010 (received; valued at \$45,000); (b) 300,000 common shares on March 10, 2011 (received; valued at \$90,000); and (c) 400,000 on or prior to March 10, 2012, subject to regulatory approval. Viper is the operator of the project. Duran receives a 10% management fee based on exploration expenditures.

The Company was granted a Category 1 Drill Permit for the Corongo Project from the Peruvian Ministry of Energy and Mines on December 20, 2010. The permit allows up to 20 drill platforms. Surface rights agreements have been signed with the two communities which exist within the Santa Rosa East and Descubridora Zones, and are valid until October 9, 2011.

Energold Drilling Peru S.A.C. ("Energold") was contracted for the Corongo drill program. Energold arrived on site on April 9th, and drilling began on April 12th. Drilling concluded on July 12th with a total of 1,757 metres drilled in 12 holes. The drilling was designed to test high priority targets on the Santa Rosa East and Descubridora Zones for sediment-hosted, structurally controlled gold and silver mineralization.

Assay results from the first four drill holes confirm the presence of widespread anomalous gold, silver and copper mineralization throughout the Santa Rosa East area, as well as high grade silver mineralization associated with quartz-sulphide veining (see news release dated June 10, 2011 at <http://www.duranventuresinc.com/news.php> for complete details). The assay intervals reported are apparent and not true widths (defined as being measured at right angles to the direction of extension of the sulphide body). In drill hole 11COR004, the strongest intercepts include 1.7 metres of 2.1 grams per tonne (gpt) Au, 1,785 gpt Ag, and 2.65% copper ("Cu"). Drill hole 11COR002 cut 2.5 metres of 0.57 gpt Au, 60.9 gpt Ag, and 0.14% Cu. Significant assay results from the first four drill holes have been summarized in the table below.

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

The Company is encouraged by these initial results, which confirm the gold, silver, and copper values reported by the Company in previous surface and underground adit channel samples. The presence of wide spread copper mineralization in the sedimentary units may indicate proximity to a porphyry copper system.

Table of Drill Results from the first four Corongo drill holes

HOLE ID	FROM (m)	TO (m)	INT (m)	Au (g Au/T)	Ag (g Ag/T)	Cu (%)

Geological Model

The Company interprets the model of the gold and silver mineralization at the Corongo Project as an intermediate sulphidation epithermal system. Characteristics of this type of system include the proximity of gold and silver mineralization to porphyritic diorite intrusive bodies, drusy quartz stockworks, banded textures in the quartz and quartz-sulfide veins, and the geochemical association of gold and silver with arsenic, antimony, barium, bismuth, lead, and zinc.

Emplacement of the gold and silver mineralization at the Santa Rosa Zone appears to be controlled by intersections of fractures and faults, which trend generally northwest, northeast, and sub-horizontal. Quartz stockworks are formed at the intersections of two or more of these structural trends, forming complex three-dimensional zones. Zones with stronger mineralization are marked by widespread phyllic (quartz-sericite-pyrite) alteration in the vicinity of the stockwork quartz veining. Anomalous gold and silver mineralization occurs in an irregular area measuring roughly 200 x 500 metres in size.

Gold and silver mineralization at the Descubridora Zone is predominantly controlled by northeast-southwest trending structures. The main mineralized zone as defined at present measures approximately 350 x 50 metres in size, but anomalous gold and silver values occur over a 600 x 250 metre area.

The gold and silver values from previous surface work programs and the significant size of the mineralized zones indicate significant exploration potential. The Corongo Project hosts several other zones with significant precious metal potential, such as Santa Rosa West, the Breccia Zone, and Pucapampa, which returned results of up to 3.5 grams of gold per tonne in underground channel sampling on a vein structure in Company sampling in 2009. The Company intends to continue exploration and expansion in these zones.

DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011

Ichuña Copper-Silver Project

The Ichuña Copper-Silver Project (1,000 hectares) is located 120 kilometres northeast of Arequipa in the Department of Moquegua in Southern Peru. Ichuña is located approximately 3 kilometres to the north of the Canahuire project, a diatreme breccia body with significant gold and copper mineralization. Minera Gold Fields Peru S.A. ("Goldfields") has recently exercised a back in right with Compañía de Minas Buenaventura S.A.A. ("Buenaventura") to earn a 51% interest in the Canahuire project, also known by the name of the concessions, Chucapaca. In a joint press release dated May 11, 2010, Gold Fields and Buenaventura announced a mineral resource estimate on the Canahuire Zone of 83.7 million tonnes grading 1.9 grams of gold per tonne and 8.2 grams of silver per tonne, for an inferred resource of 5.6 million ounces of gold (calculated as a gold equivalent) within the project area. This press release also quotes Nick Holland (CEO of Gold Fields) and Roque Benavides (CEO of Buenaventura) as saying, "Canahuire is a highly promising gold discovery in an emerging gold district in South America. Geological indications are that there is a significant upside at the Canahuire deposit, as well as at other targets within the project area." An intensive infill drilling program is currently underway at Canahuire.

Company geologists have so far defined seven mineralized zones on the Ichuña property with a variety of styles of mineralization related to intrusive events. These include porphyritic intrusive bodies and sub-volcanic intrusive bodies displaying evidence of supergene copper enrichment, skarn zones at the contacts between intrusive and carbonate-rich sedimentary rock, and altered stockwork zones in intrusive, volcanic, and sedimentary units. The evidence points to a widespread, well-mineralized hydrothermal system related to intrusive activity, with anomalous copper, silver, lead, zinc, arsenic, barium, antimony, and manganese. The mineralized zones cover an area larger than 1.0 x 2.5 kilometres.

Three field campaigns have been carried out in 2010, with a total of 790 samples collected. During the two initial work campaigns, a total of 173 samples were collected. Samples were collected as 0.5 to 3.0 metre rock channel samples, as well as panel samples ranging from 0.5 x 1.0 metre to 3.0 x 3.0 metre areas. Silver values ranged as high as 1,645 grams Ag/T (47.9 troy oz/ton), with 19 of 173 samples assaying greater than 100 grams Ag/T and 50 of 173 samples assaying greater than 10 grams Ag/T. 35 of 173 samples had copper values of greater than 1.0%, with values as high as 10.2% copper. 68 of 173 samples had copper values greater than 0.1% copper, showing very widespread anomalous copper values. Lead and zinc values were elevated as well, with 40 of 173 samples assaying over 0.1% lead, with a high value of 6.1% lead. 41 of 173 samples assayed greater than 0.1% zinc, with 5 samples returning over 1.0%.

Geological Model

Geological mapping during this program identified sedimentary clastic and carbonate rock cut by high level intrusive and volcanic units. Strongly anomalous copper and silver mineralization occurs near sediment-intrusive contacts, as disseminations in intrusive units, and in stockwork zones in both sedimentary and intrusive or volcanic units. Company geologists are interpreting the Ichuña system as being the upper levels of a porphyry copper system, with associated vein structures developed in both host sedimentary and intrusive units. The system has seen considerable surface oxidation, with iron oxide minerals such as limonite, goethite, and jarosite being commonly found. Visible copper occurs as secondary or remobilized minerals, including malachite, azurite, chrysocolla, tenorite, and chalcocite. This mineral assemblage may indicate the presence of a capping of leached rock with the potential for supergene enrichment of copper at some depth. Elevated silver values with relatively little evidence of silver-bearing sulfide minerals may indicate that there is supergene enrichment of silver as well. The extensive surface area with strongly altered rock and elevated copper, silver, lead, zinc, arsenic, barium, and antimony indicates the potential for a strong intrusive-driven hydrothermal system underlying the Ichuña Project. Mineralized structures form two distinct populations, one of which ranges in strike between 30 to 80 degrees, and the second between 110 to 160 degrees.

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

A 2011 work program and budget was established for Ichuña in March 2011, and the Company has received the Category 1 drill permit and is in the application process for the Category 2 drill permit.

Panteria Porphyry Copper Project

The Panteria Porphyry Copper prospect is located in the Department of Huancavelica in south-central Peru. It consists of one main block totaling 1,700 hectares and another 400 hectare concession two kilometres to the east. In February 2011, an additional 3,200 hectares were added onto the previously existing concessions, bringing the total to 5,300 hectares.

The property is underlain by intermediate Tertiary volcanic flows and tuffs which have been pervasively clay + iron oxide +/- silica-altered over an area of 2.5 by 1.0 kilometres, with a dominant northeast-southwest orientation. Copper-mineralized diorite porphyry outcrops at the lowest elevations on the property. The Company interprets the geological environment to consist of a volcanic-intrusive complex with fingers of copper-bearing intrusive cutting an overlying, strongly altered volcanic package.

The extent and intensity of the alteration in the volcanic rock indicates the presence of a very strong hydrothermal system driven by the underlying intrusive units. Quartz +/- tourmaline veins, veinlets, breccias, and local drusy quartz veinlets show a predominant northeast-southwest orientation and may control the distribution of the alteration. This alteration and associated geochemical anomaly appear to be focused over the areas of known intrusive bodies. Anomalous gold, silver, arsenic, antimony, lead, zinc, and mercury values extend over the entire quartz-clay altered area as mapped to date. The geochemical and alteration assemblages, combined with the textures of the drusy quartz veinlets, are indicators of a low-sulfidation epithermal gold-silver system.

Anomalous copper values cluster mostly in a 1.0 x 1.0 kilometre area, which is coincident with the area of strongest silicification and may be centred over the mineralizing system at depth. The highest copper values occur in weakly clay-altered diorite intrusive rock, with visible copper carbonates and local chalcocite. This mineral assemblage suggests that some remobilization of copper has occurred within the intrusive rock, and may indicate the presence of a supergene copper-enriched zone at some depth. Quartz stockwork veining is strongest nearer to the intrusive bodies.

Given the nature of the geological environment and mineralization, the Company is planning a ground-based induced-polarization and magnetic geophysical survey over the project area to help evaluate the potential for porphyry copper-gold and possible supergene copper mineralization at depth. The Company will combine geological, geochemical, and geophysical information in order to plan diamond drill testing in the future.

Don Pancho Silver-Lead-Zinc Project

The Don Pancho Silver-Lead-Zinc Project (600 hectares) is located in the Department of Lima. Don Pancho is a carbonate-replacement style silver-lead-zinc target, similar to the nearby Santander Project of Trevali Resources Corporation (Trevali). Previous sampling conducted by Hatum Minas on the Don Pancho Project returned values up to 238 grams of silver per tonne, 4% zinc, and 9% lead. The mineralization appears to be structurally controlled, and has been traced over a zone measuring 800 x 300 metres at surface. The Company intends to conduct surface and underground sampling programs and is considering a geophysical survey in order to prepare the project for a diamond drilling campaign.

This project is approximately 10 kilometres to the west of the Santander Project, which has updated an NI 43-101 resource estimate (Trevali Resources Corp. News Release dated November 10, 2010, filed on SEDAR) of 5.858 MT of 3.86% Zn, 1.35% Pb, and 44 g Ag/T (indicated category) and 4.806 MT of 5.08% Zn, 0.44% Pb, and 21 g Ag/T (inferred category).

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

Minasnioc Gold-Silver Project

The Company acquired the Minasnioc Gold Project in a Peruvian government auction, which was carried out in three separate auctions due to the participation of three competing companies with overlapping areas. The Company won all three auctions. The Minasnioc Project is interpreted to be a high sulfidation (or acid-sulfate) epithermal gold-silver bearing system. The concession is located in the Department of Huancavelica, approximately 300 kilometres southeast of Lima. This project has seen previous intensive exploration campaigns by Barrick Gold Corporation ("Barrick") and Compañía de Minas Buenaventura S.A.C. ("Buenaventura") between 2001 and 2007, which included surface channel sampling and drilling. In February 2011, an 800 hectare concession was added to the main 1000 hectare concession, bringing the project area to a total of 1,800 hectares.

Company geologists have made initial property visits and have defined a high sulfidation (acid sulphate) epithermal gold and silver bearing system developed in Tertiary volcanic rocks. Extensive zones of argillic and advanced argillic alteration are present, with areas of massive and vuggy silica with associated alunite. The gold-silver bearing part of the epithermal alteration system covers an area of two by two kilometres. This age of the volcanic host rocks and style of mineralization is similar to Barrick's Pierina and Alto Chicama Mines and Newmont/Buenaventura's Yanacocha Mine in Peru.

Initial rock chip sampling by the Company shows widespread anomalous gold values with associated silver, arsenic, barium, lead, mercury, and antimony geochemical anomalies, which are typical of an altered precious metal bearing system. Samples were collected as one to four-metre rock chips and panel samples ranging from two by two metre to five by five metre panels. 21 of 35 samples returned assays greater than 0.1 grams of gold per tonne, with values as high as 2.96 grams of gold per tonne. 28 of 35 samples returned silver values of greater than 1.0 gram of silver per tonne, 11 samples returned values of greater than 10.0 grams of silver per tonne, and one sample returned a high value of 70.6 grams of silver per tonne.

Outlook

For the remainder of 2011, the Company will continue to focus primarily on advancing the Aguila Copper-Molybdenum Porphyry project. The extensive diamond drilling program currently underway will be used to produce a preliminary NI 43-101 compliant resource estimate in the first quarter of 2012. Preliminary metallurgical studies will also be carried out as part of the resource estimate work.

As the drill program proceeds, several holes will also be testing priority geological, geochemical, and geophysical targets. Surface mapping, sampling, and geophysical surveys conducted to date demonstrate that the Aguila Project has potential to become a significant copper-molybdenum resource, with anomalous copper distributed over an irregular 1.7 x 1.2 kilometre surface area and strong geophysical anomalies distributed over a 3.0 x 2.0 kilometre area. Drill intersections to date show consistent copper and molybdenum values over significant widths, with known areas of mineralization open in several directions and also at depth.

During the fourth quarter of 2011 the Company will prepare the Ichuña Copper-Silver Project site in Moquegua for a preliminary diamond drill program. The geological, geochemical, and geophysical results to date indicate the presence of a copper-silver mineralized system over a 2.5 kilometre trend. The Moquegua area is emerging as an important mineralized district in Southern Peru.

Results from the 2011 diamond drilling program at the Corongo Project will be evaluated, and follow-up exploration work will be planned with partner Viper.

The Company intends to maintain a pipeline of new projects by actively evaluating new prospects and targets throughout Peru.

Results of Operations

The Company's loss is reported under IFRS for the three and six months ended June 30, 2011. The most significant impact on loss relates to the accounting for deferred exploration expenditures, as follows.

Pursuant to IFRS 6 *Exploration for, and Evaluation of, Mineral Resources*, the Company has elected to change its accounting policy to retrospectively expense all pre-feasibility exploration and evaluation costs.

The effects of this transitional change are as follows: (i) a decrease in deferred exploration assets of \$8,118,265, an increase to property, plant and equipment of \$111,196 and an increase in deficit of \$8,007,069 as at June 30 and December 31, 2010, (ii) a decrease in deferred exploration assets of \$481,715 and \$989,351 and an increase in net loss and comprehensive loss by the same amounts as at and for the three and six months ended June 30, 2010 respectively and (iii) a decrease in deferred exploration assets of \$2,071,996 and increase in net loss and comprehensive loss by the same amount as at December 31, 2010. An increase in amortization expense related to the property, plant and equipment of \$2,858, \$5,720 and \$11,436 was recorded for the three and six month period ended June 30, 2010 and the year ended December 31, 2010, respectively.

During the three months ended June 30, 2011, the Company had a net loss of \$1,866,237 compared to a net loss of \$764,493 in 2010. The Company incurred higher share-based compensation expense due to a 2,510,000 stock option grant on June 29, 2011 valued at \$362,000 using the Black-Scholes option pricing model. Exploration property expenditures increased due to increased work programs on the Company's exploration projects. Management and consulting fees increased due to an increase in management fees effective March 1, 2011. General and administrative expenses increased compared to the prior period due to costs related to moving to new office premises during the period and higher travel costs. Professional fees increased due to audit fees related to the transition to IFRS and legal fees for settling the claim against the Company by a former officer. These costs were partially offset by lower shareholder information and investor relation costs compared to the prior period, and net sublease rental income for the quarter.

During the six months ended June 30, 2011, the Company had a net loss of \$4,111,383 compared to a net loss of \$1,498,095 in 2010. The Company incurred higher share-based compensation expense due to 8,510,000 stock options granted and valued at \$1,649,927 using the Black-Scholes option pricing model. Exploration property expenditures increased due to increased work programs on the Company's exploration projects. Management and consulting fees increased due to an increase in management fees effective March 1, 2011. General and administrative expenses increased due to foreign exchange losses resulting from a declining US dollar; costs related to moving to new office premises during the period and higher travel costs. Professional fees increased due to audit fees

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS

(2) - prepared in accordance with CGAAP

Liquidity

The Company's liquid assets at June 30, 2011 were valued at \$5,833,016 (December 31, 2010 - \$6,114,375), consisting of cash and cash equivalents of \$5,648,577 (December 31, 2010 - \$6,002,801), marketable securities of \$138,000 (December 31, 2010 - \$90,000) and amounts receivable of \$46,439 (December 31, 2010 - \$21,574). Substantially all of the Company's cash is on deposit with accredited Canadian Chartered Banks. The Company has no exposure to asset-backed commercial paper.

Capital Resources

Future capital requirements will predominately be incurred for the purpose of continued exploration of the Company's Peruvian properties.

At June 30, 2011, the Company had 30,424,445 warrants outstanding exercisable for gross proceeds of \$5,824,388.

Management believes that the funds currently on hand are sufficient to continue to meet obligations through to December 31, 2011. Additional funds as required in the future, will need to be raised successfully on the capital markets, or through strategic relationships.

Off Balance Sheet Arrangements

The Company does not utilize off-balance sheet arrangements.

Transaction with Related Parties

Related parties include the Board of Directors, close family members and enterprises which are controlled by these individuals as well as certain persons performing similar functions.

Critical Accounting Estimates

The preparation of the condensed interim consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of expenses during the reporting period. Actual outcomes could differ from these estimates. The condensed interim consolidated financial statements include estimates which, by their nature, are uncertain. The impacts of such estimates are pervasive throughout the consolidated financial statements, and may require accounting adjustments based on future occurrences. Revisions to accounting estimates are recognized in the period in which the estimate is revised and the revision affects both current and future periods.

Significant assumptions about the future and other sources of estimation uncertainty that management has made at the balance sheet date, that could result in a material adjustment to the carrying amounts of assets and liabilities, in the event that actual results differ from assumptions made, relate to, but are not limited to, the following:

- i. the recoverability of exploration and evaluation assets which are included in the unaudited condensed interim consolidated balance sheet;
- ii. the inputs used in accounting for valuation of warrants and options which are included in the unaudited condensed interim consolidated balance sheet;
- iii. the inputs used in accounting for share purchase option expense in the unaudited condensed interim consolidated statement of loss and comprehensive loss;
- iv. the nil provision for decommissioning and restoration provisions which is included in the unaudited condensed interim consolidated balance sheet; and
- v. the nil provision for income taxes which is included in the unaudited condensed interim consolidated statements of loss and comprehensive loss and composition of deferred income tax assets and liabilities included in the unaudited condensed interim consolidated balance sheet.

Changes in Accounting Policies

The significant accounting policies are outlined in the June 30, 2011 condensed interim consolidated financial statements.

International Financial Reporting Standards

Effective January 1, 2011 Canadian publicly listed entities were required to prepare their financial statements in accordance with IFRS. Due to the requirement to present comparative financial information, the effective transition date is January 1, 2010. The six months ended June 30, 2011 is the Company's second reporting period under IFRS.

The Company's IFRS conversion team identified three phases to our conversion: initial diagnostic phase, impact analysis, evaluation and solution development phase and implementation and review phase. Post-implementation will continue in future periods, as outlined below.

The following outlines the Company's transition project, IFRS transitional impacts and the on-going impact of IFRS on the financial results. Note 17 to the interim financial statements provides more detail on the key Canadian GAAP to IFRS difference, the accounting policy decisions and IFRS 1, First-Time Adoption of International Financial Reporting Standards, optional exemptions for significant or potentially significant areas that have had an impact on the financial statements on transition to IFRS or may have an impact in future periods.

Transitional Financial Impact

The tables below outline:

- a) Adjustments to the Corporation's equity on adoption of IFRS on June 30, 2010 and December 31, 2010 for comparative purposes.
- b) Adjustments to statement of income for the three and six months ended June 30, 2010.

The following tables should be read in conjunction with the more detailed footnotes in the condensed interim consolidated financial statement notes as referenced in the tables.

Reconciliation of consolidated balance sheet:

Business Activities and Key Performance Measures

The Company has assessed the impact of the IFRS transition project on our financial covenants and key ratios. The transition did not significantly impact the Company's covenants and key ratios.

Information Technology and Systems

The IFRS transition project did not have a significant impact on our information systems for the convergence periods. The Company does not expect significant changes in the post-convergence periods.

Post-Implementation

The post-implementation phase will involve continuous monitoring of changes in IFRS in future periods. The Company notes that the standard-setting bodies that determine IFRS have significant ongoing projects that could impact the IFRS accounting policies that have been selected. In particular, there may be additional new or revised IFRSs or IFRICs in relation to consolidation, joint ventures, financial instruments, hedge accounting, discontinued operations, leases, employee benefits, revenue recognition and stripping costs in the production phase of a surface mine. The International Accounting Standards Board is currently working on an extractive industries project, which could significantly impact the Company's financial statements. The Company has processes in place to ensure that potential changes are monitored and evaluated. The impact of any new IFRSs and IFRIC interpretations will be evaluated as they are drafted and published.

Financial Risk Factors

a) Credit risk management

Credit risk relating to accounts receivable arises from the possibility that any counterparty to an instrument fails to perform. The Company does not feel there is significant counterparty risk that could have an impact on the fair value of cash and cash equivalents and receivables.

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

b) Liquidity risk

The Company has in place a planning and budgeting process to help determine the funds required to support the Company's normal operating requirements on an ongoing basis and its capital, development and exploration expenditures. The Company ensures that there are sufficient funds to meet its short-term requirements, taking into account its anticipated cash flows from operations and its holdings of cash and cash equivalents.

As of June 30, 2011, the Company had a cash and cash equivalents balance of \$5,648,577 (December 31, 2010 - \$6,002,801) to settle current accounts payable and accrued liabilities of \$196,519 (December 31, 2010 - \$222,925). The Company's other current assets consist of marketable securities of \$138,000 (December 31, 2010 - \$90,000), amounts receivable of \$46,439 (December 31, 2010 - \$21,574) and prepaid expenses and advances of \$85,740 (December 31, 2010 - \$12,094).

c) Market risk

At the present time, the Company does not hold any interest in a mining property that is in production. The Company's viability and potential success depends on its ability to develop, exploit, and generate revenue from the development of mineral deposits. Revenue, cash flow, and profits from any future mining operations in which the Company is involved will be influenced by precious and/or base metal prices and by the relationship of such prices to production costs. Such prices can fluctuate widely and are affected by numerous factors beyond the Company's control. The fair value of the Company's marketable securities is also influenced by these factors and is therefore subject to market risk.

The Company's investment in public companies are sensitive to a plus or minus 5% change in Canadian equity prices which would affect comprehensive income (loss) by approximately \$6,900.

d) Foreign exchange risk

The Company's financings are in Canadian dollars. Certain of the Company's transactions with its subsidiaries are incurred in foreign currencies and are therefore subject to gains or losses due to fluctuations in exchange rates.

As at June 30, 2011, the Company had cash and cash equivalents balances of \$2,561,966 (US\$2,656,264) (December 31, 2010 - \$1,107,273 (US\$1,113,284)) in U.S. dollars and accounts payable of \$132,564 (S/.380,223) (December 31, 2010 - \$56,151 (S/.160,171)) in Peruvian Nuevo Soles.

Sensitivity to a plus or minus 5% change in the foreign exchange rate would have affected the net loss by approximately \$121,470 in the six month period ended June 30, 2011.

The Company does not undertake currency hedging activities to mitigate its foreign currency risk.

e) Interest rate risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The majority of the Company's cash and cash equivalents balances earn interest at fixed rates over the next three to twelve months. It is management's opinion that the Company is not exposed to significant interest rate risk. The Company has no interest bearing debt.

A sensitivity analysis has determined that an interest rate fluctuation of 1% would not have resulted in significant fluctuation in the interest income during the six month period ended June 30, 2011.

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

f) Fair value of financial assets and liabilities

The book values of the cash and cash equivalents, accounts receivable and accounts payable and accrued liabilities, approximate their respective fair values due to the short-term nature of these instruments.

The fair values together with the carrying amounts shown in the balance sheet are as follows:

	Carrying amount	Fair Value	Carrying amount	Fair Value
	As at June 30, 2011		As at December 31, 2010	
	\$	\$	\$	\$
Cash and cash equivalents	5,648,577	5,648,577	6,002,801	6,002,801
Marketable securities	138,000	138,000	90,000	90,000
Amounts receivable	46,439	46,439	21,574	21,574
Accounts payable and accrued liabilities	(196,519)	(196,519)	(222,925)	(222,925)

Other MD&A Requirements**Capital Stock**

a) Authorized share capital as at June 30, 2011:

Unlimited common shares without par value
100,000,000 preferred shares without par value

b) Securities issued and options granted:

Securities issued during the six months ended June 30, 2011:	15,851,000
Options granted during the six months ended June 30, 2011:	8,510,000

c) Common shares issued and outstanding at August 25, 2011:

	Shares #
Balance, June 30, 2011	183,049,958
Issued subsequent to June 30, 2011	-
	183,049,958
Potential issuance of common shares:	
Stock options	13,895,000
Warrants	30,424,445
Fully diluted	227,369,403

Shareholders Rights Plan

A Shareholders Rights Plan Agreement ("SRP") between Duran Ventures Inc. and Equity Transfer & Trust Company was re-approved by shareholders at the Company's Annual and Special Meeting on June 29, 2011. The SRP was subsequently approved by the TSX Venture Exchange, and is effective June 29, 2011.

Risks and Uncertainties

At the present time, the Company does not hold any interest in a mining property in production. The Company's viability and potential successes lie in its ability to develop, exploit and generate revenue out of mineral deposits. Revenues, profitability and cash flow from any future mining operations involving the Company will be influenced by precious and/or base metal prices and by the relationship of such prices to production costs. Such prices have fluctuated widely and are affected by numerous factors beyond the Company's control.

**DURAN VENTURES INC.
MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE SIX MONTH PERIOD ENDED JUNE 30, 2011**

The Company has limited financial resources and there is no assurance that additional funding will be available to it for further exploration and development of its projects or to fulfill its obligations under applicable agreements. Although the Company has been successful in the past in obtaining financing through the sale of equity securities, there can be no assurance that the Company will be able to obtain adequate financing in the future or that the terms of such financing will be favourable. Failure to obtain such additional financing could result in delay or indefinite postponement of further exploration and development of the property interests of the Company, with the possible dilution or loss of such interests.

Commitments

In February 2011, the Company signed a lease agreement for a new office space commencing June 1, 2011. The term of the lease is for a period of five years, expiring on May 31, 2016. The annual lease payments are approximately \$135,000. As part of the agreement, the Company paid a rental deposit of \$12,629 to be applied to the first rental payment due and an additional \$25,608 to be held as a security deposit.

Additional disclosure of the Company's technical reports, material changes reports, news releases and other information can be obtained on SEDAR.
